Case Study

Airbag housing using nylon composite sheet technology

Over 30 percent less weight

![Image of airbag housing](image1.png)

**Grade:**
- Durethan® DP BKV 240 H2.0
- TEPEX® dynalite 102-RG600

**Manufacturer:** Takata AG, Germany

In automotive design, parts subjected to high loads, such as plastic/metal hybrid front-end structures, can show substantial weight savings when selected metal stampings are replaced with polyamide 6 (PA 6) composite sheet. This material can also be used to make all-plastic structures significantly lighter. One example of this is the housing for a passenger airbag module. The use of PA 6 composite sheet cuts the weight of the housing by over 30 percent compared with a mass produced, injection-molded version (also made of polyamide 6). The lightweight construction potential of PA 6 composite sheet technology can also be applied to plastic parts to considerably lower the weight, emissions and fuel consumption of vehicles in the spirit of Green Mobility. The airbag housing shown above was designed as part of a joint advanced engineering project between LANXESS, Takata AG of Aschaffenburg, KraussMaffei Technologies GmbH of Munich, BondLaminates GmbH of Brilon and Christian Karl Siebenwurst GmbH & Co. KG of Dietfurt.

The airbag housing accommodates the gas generator and the folded airbag. Until now, such components were made mainly of steel, aluminum, or injection molded thermoplastics. In this housing concept for the passenger-side airbag, the long side walls are made of molded TEPEX dynalite 102 RG600 from Bond-Laminates. This nylon composite sheet of polyamide 6, reinforced with 47 percent continuous glass fibers by volume, is over-molded and reinforced with Durethan DP BKV 240 H2.0, an impact-modified polyamide 6 copolymer from LANXESS. The design using PA 6 composite sheet technology enables the wall thickness of the side walls to be reduced from 4 mm to less than 1 mm, resulting in a considerable cost savings.

When the airbag is triggered in an accident, the base and walls of the housing must be able to withstand the explosion and the pressure during inflation of the airbag. Although the side walls are quite thin, they can withstand the sudden pressure because of the high strength and stiffness of the PA 6 composite sheet. Composite sheet technology is generally suitable for all plastic automotive parts where high stiffness and strength need to be combined with low weight.
LANXESS is able to accurately simulate all process steps in the manufacture of PA 6 composite sheet parts – including the highly complex processes involved in forming the material. For the airbag housing, LANXESS was able to calculate the variation in glass fiber alignment in shaped nylon composite sheets in order to account for their anisotropic behavior. This expertise is part of the HiAnt brand, in which the High Performance Materials business unit has pooled the know-how it has developed in materials, design, simulation and process technology to deliver tailored customer service and solutions.

The ability to save weight in vehicles by using plastics such as Durethan®, Pocan® and TEPEX® makes an important contribution to saving fuel and, linked to this, reducing CO₂ emissions.

The manner in which you use and the purpose to which you put and utilize our products, technical assistance and information (whether verbal, written or by way of production evaluations), including any suggested formulations and recommendations, are beyond our control. Therefore, it is imperative that you test our products, technical assistance and information to determine to your own satisfaction whether they are suitable for your intended uses and applications. This application-specific analysis must at least include testing to determine suitability from a technical as well as health, safety and environmental standpoint. Such testing has not necessarily been done by us. Unless we otherwise agree in writing, all products are sold strictly pursuant to the terms of our standard conditions of sale. All information and technical assistance is given without warranty or guarantee, and is subject to change without notice. It is expressly understood and agreed that you assume and hereby expressly release us from all liability, in tort, contract or otherwise, incurred in connection with the use of our products, technical assistance and information. Any statement or recommendation not contained herein is unauthorized and shall not bind us. Nothing herein shall be construed as a recommendation to use any product in conflict with patents covering any material or its use. No license is implied or in fact granted under the claims of any patent.

Typical Properties
Property data is provided as general information only. Property values are approximate and are not part of the product specifications.

Health and Safety
Appropriate literature has been assembled which provides information concerning the health and safety precautions that must be observed when handling LANXESS products mentioned in this publication. Before working with these products, you must read and become familiar with the available information on their hazards, proper use, and handling. This cannot be overemphasized. Information is available in several forms, e.g., material safety data sheets (MSDS) and product labels. Consult your LANXESS Corporation representative or contact the Product Safety and Regulatory Affairs Department at LANXESS. For materials that are not LANXESS products, appropriate industrial hygiene and other safety precautions recommended by their manufacturer(s) must be followed.

Regulatory Compliance
Some of the end uses of the products described in this brochure must comply with applicable regulations, such as the FDA, NSF, USDA and CPSC. If you have any questions on the regulatory status of any LANXESS engineering thermoplastic, consult your LANXESS Corporation representative or contact the LANXESS Regulatory Affairs Manager.

Note:
The information contained in this publication is current as of July, 2013. Please contact LANXESS Corporation to determine if this publication has been revised.
